

Kristopher Cronshaw

Profile

I have been able to study many different programming languages from a fairly early time. When I started high school I was able to take the time to learn some java code and with that a love of coding blossomed. I took a course in python programming and with that I have been creating new and exciting things with the language ever since. I have also been able to learn PHP, HTML, CSS and a number of other programming languages in my spare time.
